

### a) Lexical Errors:-

Errors that occur when the sequence of characters (tokens) is invalid.

Detected by:-

Lexical Analyzer (Scanner).

Handling:-

- Remove invalid characters.
- Skip incorrect tokens.
- Report error with line number.

Eg:- `int lx=10;` //invalid identifier  
`int a=10@;` //illegal character '@'

### b) Syntax Errors:-

Errors when the program violates grammar rules.

Detected by:-

Parser (Syntax Analyzer).

Handling:-

- Error recovery techniques:-
  - Panic mode (skip tokens).
  - Insert missing symbols.
- Continue parsing after correction.

Eg:- `int a=;` //missing value  
`if (a>5` //missing closing bracket

### c) Semantic Errors:-

Errors related to meaning of the program.
